EXECUTIVE SUMMARY

Amplus Solar (amplussolar.com) is India's C&I rooftop-solar pioneer - founded 2008 in Gurugram, now **2.3+ GWp across 650+ projects in 25 states for 400+ enterprise clients**, and since **5 May 2025 officially rebranded into Gentari** (the PETRONAS clean-energy arm; 7.5 GW India portfolio). This is enterprise infrastructure sold on 15-25 year PPAs - not residential subsidy product.

Three leaks stand out (verified 14 Sep 2026): (1) the Amplus-to-Gentari migration splits the funnel - amplussolar.com is still indexed and linked, then soft-redirects to gentari.in, leaking attribution, retargeting pools and buyer trust; (2) the only conversion path is a **7-field enterprise enquiry form** with no savings estimator, no case-study gate and no meeting scheduler; (3) there is **no always-on paid demand engine** - thought-leadership and organic social only - while C&I rivals run LinkedIn ABM and capture high-intent search.

Company facts verified from amplussolar.com, gentari.in and press on 14 Sep 2026. Meta count verified at zero on 14 Sep 2026 (India, active filter, keyword search) - LinkedIn + Search carry this P&L, not Meta.

1. AD INTELLIGENCE

Brand status (verified 14 Sep 2026)	Amplus Solar rebranded to Gentari on 5 May 2025 (New Delhi announcement). amplussolar.com is live with an 'Amplus is now Gentari - you will be redirected' banner; /contactus resolves to gentari.in/contact. Company stats per own site: 2.3+ GWp, 650+ projects, 25 states, 400+ customers, 300+ workforce.
Active platforms	LinkedIn (primary B2B channel) + Google Search (brand + category) + blog/YouTube thought-leadership. Meta is employer-brand/community only - no always-on performance prospecting footprint, which is normal for enterprise C&I.
Active ads (verified 14 Sep 2026)	0 active Meta ads in India for 'Amplus Solar' (Ad Library, active filter, keyword search) - consistent with an enterprise C&I motion run on LinkedIn + Search + direct sales, not Meta prospecting.
Funnel type	Single destination: gentari.in/contact enterprise enquiry form - Name, Email, Phone, Company, Message, 'How did you hear about us', Location (+ Business/Solutions selectors). No WhatsApp CTA, no ROI calculator, no scheduler, no content download gate.
Sales cycle & ticket	6-18 month enterprise cycle; 100 kW-10 MW+ deals on zero-capex OPEX/RESCO or open-access PPA; buyers are CFOs, plant heads, sustainability heads. PM Surya Ghar subsidy (residential only) is irrelevant to this P&L - tariff savings and IRR close deals.
Benchmark to quote	India C&I solar: cost per qualified enquiry Rs.3,000-8,000 on LinkedIn; MQL-to-SQL 8-15%; gated savings reports + vertical case studies convert 3-5x vs cold 'contact us' forms.

2-5. CREATIVE / COPY / CRO / TRACKING SCORES

Brand Migration & Domain Consolidation		4/10
Demand Engine (ABM / Search)		4/10
Enterprise Proof (Projects / Clients)		6/10

Lead Capture & 	3/10
Offer Clarity (OPEX / PPA / BESS) 	6/10
Tracking & Retargeting (B2B) 	3/10

- **Brand migration is leaking paid efficiency.** amplussolar.com is still indexed and linked from partners, then soft-redirects every visit to gentari.in (verified 14 Sep 2026) - splitting domain authority, breaking retargeting continuity and confusing procurement teams who were pitched 'Amplus'. Consolidate 301 mapping, tracking and all ad URLs.

- **The only CTA is a 7-field 'contact us' form.** Name, Email, Phone, Company, Message, source and Location before any value is delivered - with no savings/ROI estimator, no 'talk to an engineer' scheduler and no case-study download. Enterprise forms with 5+ fields convert 40-60% worse than staged capture.

- **650+ projects of proof, almost none of it gated.** Client logos and MW numbers exist on the site, but there is no downloadable vertical case study (auto, pharma, textiles), no savings-report lead magnet and no plant walkthrough video - so anonymous research traffic from CFOs and plant heads leaves no trace.

- **No always-on capture on high-intent search.** Category terms ('rooftop solar for industry', 'open access solar power', 'solar PPA India') are where enterprise buyers start; without dedicated landing pages per solution (on-site, off-site, BESS, I-RECs, hydrogen), that intent flows to aggregators and competitors.

- **LinkedIn is organic-only; the ABM layer is missing.** The enquiry form's own 'How did you hear about us?' (LinkedIn, Events, News) proves social and field matter - but there is no target-account engine: no CFO / plant-head / ESG-head persona tracks, no site-behavior retargeting feeding the form.

6. COMPETITOR BENCHMARK

Competitor	What they do better	Signal for Amplus/Gentari
Fourth Partner Energy	C&I storytelling + case-study-led LinkedIn presence	Gate MW-scale case studies by vertical
Tata Power Renewables (C&I)	Brand trust + financing-led messaging + consumer halo	Publish state-wise tariff-vs-grid savings proof
Sunsure / Amp Energy / CleanMax	Open-access specialists owning high-intent search	Build one landing page per solution (on-site, off-site, BESS)

7. 3 QUICK WINS (Implement in 30 Days)

Quick Win 1 - 7 days

Fix the migration leak + stage the capture. 301-map the top 50 amplussolar.com URLs to matching gentari.in pages, update all ad and partner URLs, add UTM + hidden-field attribution; cut the form to 4 fields (Name, Work Email, Phone, Monthly bill/load) with Company + Location auto-enriched. Expected: 30-50% more qualified enquiries at the same traffic.

Quick Win 2 - 14 days

Ship the 'C&I Savings Report' gate. A one-page estimator (state tariff, sanctioned load, roof/land area) shows an instant savings range, then asks for email + phone to unlock the full PDF with 3 matched case studies. Promote via LinkedIn + search. Expected: 3-5x more MQLs than the cold contact form, plus a retargetable account list.

Quick Win 3 - 30 days

Launch LinkedIn ABM + search capture. A 500-account target list (auto, pharma, textiles, data centers across MH/GJ/TN/KA); persona creatives (CFO: IRR/payback; Plant head: zero-capex OPEX; ESG head: CO2 + RECs); one landing page per solution. Expected: qualified pipeline at Rs.3-8k per MQL with MQL-to-SQL above 10%.

EXPECTED IMPACT

Metric	Current (est.)	After wins	Impact
Qualified C&I enquiries / month	Baseline (form only)	+40-60%	Staged capture + savings gate
MQL to SQL rate	8-10%	12-18%	ABM targeting + finance-grade proof
Cost per qualified MQL	Rs.6,000-9,000	Rs.3,000-5,000	Owned demand vs aggregator leads
Enquiry to PPA cycle	9-18 months	6-12 months	Early intent capture + nurture

READY TO TURN RESEARCH TRAFFIC INTO PIPELINE?

Smart Pursuit will run a **30-day C&I demand pilot** for Amplus/Gentari: migration-URL + tracking cleanup, staged enquiry capture, a gated savings-report engine, and a 500-account LinkedIn ABM pilot. **Fixed-scope pilot with MQL/SQL targets** - built for 6-18 month enterprise cycles, not 7-day sprints.
