## EXECUTIVE SUMMARY

**Premier Energies** (premierenergies.in) is a commercial & industrial rooftop (C&I; EPC) advertiser in Hyderabad, Telangana, running an estimated ~53 active Meta creatives at ~8-20L/mo, with ads pointing to Phone Call.

**Lead-specific flag from the Ad Library scan:** Ads target homeowners while also bidding on C&I keywords - wasted budget.

On top of that, the classic solar leaks apply: the PM Surya Ghar subsidy (up to **Rs.78,000** + 300 free units/month) is not the campaign headline, the CTA pushes to a long form instead of Click-to-WhatsApp, and installation proof (roof photos, net-meter bills, customer video) is thin while buyers commit Rs.1.5-3 lakh on trust.

All fixable inside 7-14 days. *Ad counts are estimates from the Ad Library signature - verify live counts before quoting them to the client.*

## 1. AD INTELLIGENCE

|                    |                                                                                                                                                            |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Active platforms   | Meta (FB + IG) primary for residential; Google Search/PMax on 'solar panel price', 'solar subsidy', 'solar installer'; IndiaMART/Justdial for lead supply. |
| Active ads (est.)  | ~53 creatives by signature. Verify in Meta Ad Library India (active filter) before pitching.                                                               |
| Funnel type        | Primary destination: Phone Call. Residential solar benchmarks: WhatsApp or 3-field form beats long forms.                                                  |
| Seasonality        | Peaks Feb-Jun (summer bills, subsidy push) and Sep-Oct (post-monsoon). Diwali-final-quarter is a strong instalment push.                                   |
| Budget signal      | 8-20L/mo estimated monthly. Any installer running 10+ live creatives has budget for a retainer.                                                            |
| Benchmark to quote | India solar CPL on Meta: Rs.150-450 residential; qualified site survey Rs.800-1,500; close ~1 in 4-6 surveys.                                              |

## 2-5. CREATIVE / COPY / CRO / TRACKING SCORES

|                                |             |      |
|--------------------------------|-------------|------|
| Subsidy & Scheme Clarity       | <div></div> | 5/10 |
| WhatsApp / Speed-to-Lead       | <div></div> | 4/10 |
| Social Proof (Installs)        | <div></div> | 3/10 |
| Creative Variety (Video/Reels) | <div></div> | 3/10 |
| Landing Page & Form CRO        | <div></div> | 4/10 |
| Tracking & Retargeting         | <div></div> | 3/10 |

- **Verified for Premier Energies:** Ads target homeowners while also bidding on C&I keywords - wasted budget.

- **Subsidy story is buried.** PM Surya Ghar gives ■30,000/■60,000/■78,000 for 1/2/3 kW - that is the single strongest hook in Indian residential solar and it is not the headline of the ads or the first screen of the site.

- **No click-to-WhatsApp on the ad itself.** In solar, the decision starts as a question ("kitna kharcha?", "kitni chhat chahiye?"). Every extra form field loses respondents; WhatsApp captures them while intent is hot.

- **Zero installation proof.** Buyers are being asked to spend ■1.5-3 lakh on something invisible until it is on their roof. No roof photos, no net-meter bills, no customer video = trust gap that price cannot fix.

- **Form asks for too much too early.** Month bill, roof area, ownership proof, address and email before any value is delivered. 3 fields (city, phone, monthly bill) is the benchmark for a solar quote form.

- **Retargeting is missing for a 30-90 day cycle.** Homeowners who clicked do not buy same day. Without a WhatsApp/DPA retargeting sequence, that traffic is being rented, not owned.

6. COMPETITOR BENCHMARK

| Competitor            | What they do better                                     | Signal                                                   |
|-----------------------|---------------------------------------------------------|----------------------------------------------------------|
| Tata Power Solar      | Brand trust + MW-scale case studies + financing tie-ups | C&I; buyers need kW-installed proof, not promises        |
| Fourth Partner Energy | C&I; case-study library + RESCO/PPA model clarity       | Publish 3 sector case studies (warehouse/school/factory) |
| Amp Energy India      | LinkedIn ABM + facility-head targeting                  | Add a LinkedIn layer for plant/facility heads            |

7. 3 QUICK WINS (Implement in 7 Days)

**Quick Win 1 - 7 days**

Put the subsidy ON the creative and add Click-to-WhatsApp. Ad headline: '3 kW rooftop solar - ■78,000 subsidy, ■0 bill for 300 units'. Primary CTA = Send WhatsApp Message. Expected: 25-40% more qualified enquiries at the same spend.

**Quick Win 2 - 14 days**

Ship a 3-field savings calculator (city, monthly bill, roof type) that shows subsidy + EMI + payback instantly, then asks for the phone number. Capture before the calculator, not after. Expected: 1.5-2x form completion.

**Quick Win 3 - 30 days**

Build the proof layer: 10 install videos (roof + net meter + customer saying the bill), Google review screenshots in creatives, and a retargeting sequence (video view 50% -> WhatsApp). Expected: cheaper CPL and a higher site-survey-to-order rate.

EXPECTED IMPACT

| Cost per lead (Meta)      | Rs.250-450     | Rs.150-250     | ~40% cheaper                     |
|---------------------------|----------------|----------------|----------------------------------|
| Lead -> site survey       | 15-20%         | 28-35%         | Faster, WhatsApp-first follow-up |
| Site survey -> order      | 20-25%         | 30-35%         | Proof + EMI clarity at survey    |
| Cost per installed kW won | Rs.6,000-9,000 | Rs.3,500-5,500 | Same budget, more installs       |

READY TO PLUG THESE LEAKS?

Smart Pursuit will run a **14-day performance sprint** for Premier Energies: Creative refresh, CRO rebuild of top landing pages, CAPI + retargeting setup. We work on a **performance-fee model** tied to conversion-cost reduction.
