01 METHOD

Dated public-evidence snapshot checked 06 October 2026. Meta evidence is cited by individual Library ID and advertiser/page ID; the selected cards are not an account-wide count. Public ad counts and rendered variants can change daily; recheck before relying on them. Meta search-type parameters can be ignored by the interface, so keyword results are not treated as page or advertiser proof. Bengaluru relevance is based only on explicit creative or first-party material; no audience targeting is inferred.

Contacts and offer details are taken from the brand's own website, help or corporate pages and remain routing contacts unless a buyer role is explicitly published. No private account, booking, order or analytics records were accessed. Spend, ROAS, CPA, conversion outcomes and event firing are marked unavailable or not measured. A public ad card or URL alone does not prove that tracking events fire.

02 THE AD ACCOUNT

Public-evidence fit	18 / 20 · 9.0 / 10 · High public-signal fit. Public-evidence-fit triage only: direct paid signal, explicit Bengaluru context, visibility of the public CTA, first-party source coverage and suitability of the published contact route. Not an effectiveness, conversion, revenue, spend, ROI, forecast or sales-probability score.
