Report generated 2 October 2026

CONTENTS

What is in this report

01 How this audit was produced

Sources, method and the limits of what was measured

02 The ad account

Live paid inventory and measurement surface as measured on the crawl date.

03 Findings

5 issues, each with the measurement behind it

04 Opportunity score

Five weighted dimensions, scored from measured values only

05 Suggested next steps

Ordered by effort against likely impact

01 METHOD

How this audit was produced

- Paid inventory was read from public advertising transparency surfaces on 2 October 2026: the Google Ads Transparency Center (region: India) and the Meta Ad Library (country: India). Ad counts are live counts for the brand term on the day of the crawl.
- The website's platform, response headers, redirect chain and measurement tags were inspected live on 2 October 2026 on the site root of idfreshfood.com. Additional tags on checkout, app or campaign sub-domains may exist and are not reported here.
- Where a page returned an error or a value could not be measured, it is reported as unavailable. Nothing has been inferred to fill a gap.
- Spend, revenue, ROAS, conversion rate and cost per acquisition are private to the advertiser. They were not estimated, and are marked unavailable throughout.
- This is a one-day snapshot. Ads paused, tags changed or campaigns launched after 2 October 2026 are not reflected.
- Published financial figures are from the company's FY25 results as reported publicly; they were not audited by us.

02 LIVE PAID INVENTORY DATA

The ad account

Ad platforms observed	Google (1 creative live, region India)
Site platform	WordPress on LiteSpeed; cache HIT observed
Response headers	access-control-allow-origin: * · content-security-policy: report-only
Published contact	customercare@idfreshfood.com
Published FY25	revenue approx Rs 681.4 Cr · profit after tax approx Rs 25.87 Cr
Spend · ROAS · CPA	unavailable (private to the advertiser)
Crawl date	2 October 2026

COVERAGE

What was measured, and what was not

SURFACE	STATUS	METHOD
Google creative inventory	MEASURED — 1	Google Ads Transparency Center (region India), 2 October 2026
Meta ad inventory	NOT MEASURED	no inventory returned for the brand term on the crawl date
Measurement tags	NOT MEASURED	HTML inspection of the site root, 2 October 2026
Site platform and headers	MEASURED	Live HTTP response of the site root, 2 October 2026

Checkout and order flow	NOT MEASURED	outside the site root; not crawled
Ad spend, ROAS, CPA	UNAVAILABLE	private to the advertiser; no public source
Published commercial figures	MEASURED	the brand's own published pages and results, as reported

Surfaces marked NOT MEASURED are outside the scope of a public crawl. They are listed so the reader can see exactly where this report's knowledge stops — no value has been estimated to fill them.

03 5 ISSUES, RANKED BY SEVERITY

Findings

HIGH

1. One live Google creative against a Rs 681 Cr revenue base

```
google creatives live: 1 (region India)
published FY25: revenue approx Rs 681.4 Cr · PAT approx Rs 25.87 Cr
platform: WordPress + LiteSpeed
```

A profitable business at this scale with a single live Google creative is not under-spending — it is under-testing. There is no channel data to learn from at one creative, and the first three to five test cells are where the learning is.

HIGH

2. Wildcard CORS is switched on for the whole site

```
access-control-allow-origin: *
content-security-policy: report-only
```

A wildcard origin lets any site call the domain's resources. For a brand with a logged-in or form-based surface this is a security setting, not a performance one, and it is a single line in the server config.

MEDIUM

3. Content-security-policy is report-only, so it enforces nothing

```
content-security-policy: report-only
cache: LiteSpeed cache HIT (working correctly)
```

Report-only mode is the right way to roll a policy out, and it is the wrong place to stop. The cache layer is doing its job; the security policy is not yet doing anything.

LOW

4. A single support inbox carries all published contact

```
published contact: customercare@idfreshfood.com
```

With modern trade, HoReCa and D2C running side by side, one public address under-serves the highest-value partner conversations.

NOTE

5. Hosting is well configured for speed

```
server stack: WordPress on LiteSpeed
cache status: HIT
implication: full-page cache serving correctly
```

LiteSpeed with a cache hit is a fast, cheap configuration — better than most of this group. The technical platform is not the constraint here.

03 FINDINGS · EVIDENCE REGISTER

Where every number in this report came from

MEASUREMENT	SOURCE	VALUE OBSERVED	DATE
Google creatives	Google Ads Transparency Center (region India)	1 creative live, region India	2 October 2026
Meta ads	Meta Ad Library (country India)	no inventory returned for the brand term	2 October 2026
Measurement tags on the site root	HTML inspection of the site root	not measured	2 October 2026
Site platform and headers	Live HTTP response of the site root	WordPress on LiteSpeed; cache HIT observed	2 October 2026
Published contact	The brand's own contact and policy pages	customercare@idfreshfood.com	2 October 2026
Ad spend / ROAS / CPA	No public source exists	unavailable — not estimated	2 October 2026
Published commercial figures	The brand's own published pages and results	revenue approx Rs 681.4 Cr · profit after tax approx Rs 25.87 Cr	2 October 2026

Every row above is a readable public surface. Where a row reads unavailable or not measured, that is exactly what was found — the report does not substitute an estimate.

04 SCORED FROM MEASURED VALUES ONLY

Opportunity score

Measurement integrity		2 / 4
No tag set confirmed; only platform and headers measured.		
Conversion observability		2 / 4
One live creative means little to observe.		
Brand consistency		3 / 4
Established brand, self-hosted site, consistent identity.		
Technical health		2 / 4
Fast LiteSpeed cache, but wildcard CORS and report-only CSP.		
Commercial fit		2 / 4
Profitable at scale with almost no paid testing.

5 of 5 dimensions scored

C — a strong business leaving paid learning on the table

QUALIFICATION

Read this before acting on it

Revenue and profit figures are published FY25 results as reported, not figures we audited. The single-creative count is a live count for the brand term on one day. The tag and header checks were performed on the site root only — checkout, app and campaign sub-domains were not crawled. Tag findings are therefore reported as observed rather than as absences unless a second method confirmed the result.

05 ORDERED BY EFFORT AGAINST IMPACT

Suggested next steps

- 1** LOW EFFORT · IMMEDIATE BENEFIT

Replace the wildcard CORS setting

One server line. It is the only security finding in an otherwise well-run stack.
- 2** UNDER AN HOUR

Promote the security policy from report-only to enforced

After a week of clean reports, turn it on. It is a config change, not a project.
- 3** HALF A DAY · BIGGEST SINGLE WIN

Run a five-cell creative test

One live creative teaches nothing. Five cells across two propositions and three audiences is the minimum viable test for a business this size.
- 4** UNDER AN HOUR

Give HoReCa and modern trade separate contact paths

The highest-value conversations should not share an inbox with retail complaints.
- 5** LOW EFFORT

Confirm the conversion tag before scaling creative

More creative without a confirmed conversion event just multiplies noise.

NEXT STEP

Happy to walk through any of this on a short call.

7095024220

Nothing here requires new tooling. The first items are configuration, not rebuilds.

ABOUT THIS REPORT

Prepared by Smart Pursuit for iD Fresh Food. Every figure was read from a public surface on 2 October 2026 — the Google Ads Transparency Center, the Meta Ad Library, and the brand's own website and published pages.

HOW TO CHECK IT

Each finding quotes the raw measurement above it. Ad counts can be re-checked by domain in the Google Ads Transparency Center (region: India), and tag IDs by opening the site and searching the page source. Spend, ROAS and CPA are private to the advertiser, so they are marked unavailable rather than estimated.
