EXECUTIVE SUMMARY

CRI Pumps runs the largest creative pool in this Day-1 cohort - an estimated **56 live Meta ads** - and has arguably the strongest proof in the entire fifty-lead list: **1,81,000 solar pumping systems commissioned nationwide**, a **Rs.320 crore MSEDCL empanelment for 10,714 off-grid solar pumps** under PM-KUSUM (Aug 2025), **6,100 million kWh saved** and **4.8 million tonnes of CO2 avoided**. On 14 Sep 2026 the destination those 56 ads point into tells the buyer almost none of it. This audit is about the distance between the two.

1. AD INTELLIGENCE

Live creatives	~56 active Meta ads (Day-1 estimate, 14 Sep 2026) - the largest pool in the Day-1 list, at an estimated Rs.8-20 L/month. Verify in Meta Ad Library India.
Destination	Lead Form. The Day-1 domain cripumps.com does not serve its own site - it resolves to crigroups.com , the group corporate domain.
Segment reality	This is not rooftop solar. It is solar pumping under PM-KUSUM - a scheme with a fundamentally different buyer (farmer + state nodal agency), a different subsidy structure (60-90%) and a hard deadline.
Proof available	1,81,000 systems commissioned; Rs.320 Cr MSEDCL / 'Magel Tyala Saur Krushi Pump' award for 10,714 pumps at 3/5/7.5 HP with 5-year warranty and IoT monitoring; earlier Rs.300 Cr PM-KUSUM-3 work orders across Haryana, UP, Maharashtra and Rajasthan; MNRE-approved KUSUM models.
Group scale	60+ years, 22 global manufacturing facilities, 9,000+ product ranges, presence in 120 countries, 15 wholly-owned subsidiaries, 2M+ customers added a year. Chairman G. Soundararajan.

2-5. CREATIVE / COPY / CRO / TRACKING SCORES

Subsidy & Scheme Clarity		2/10

Social Proof		3/10
Creative Variety		7/10
Landing / CRO		2/10
Tracking & Attribution		4/10

- **1. The solar page is effectively empty - one photograph and nothing else.** This is the finding that matters most, because 56 creatives are pointing at this part of the site. Fetched live on 14 Sep 2026, **crigroups.com/solar-pump/** returns a single image file (solar-panel.jpg) and no readable body content at all - no HP-wise product table, no subsidy explanation, no pricing, no case studies, no enquiry form, no downloadable spec sheet. The indexed description promises real substance ('MNRE approved PM-KUSUM models available', '1.0 HP - 3.0 HP Solar Pumping System', corrosion-resistant stainless steel, remote monitoring), so the content exists somewhere in the stack - it simply does not render for a visitor or a crawler. A farmer or a state-agency buyer arriving from an ad lands on a picture of a solar panel.

- **2. The Day-1 domain does not serve the brand's own site.** cripumps.com resolves to **crigroups.com**, and the solar business is a subfolder of a 9,000-product group corporate site rather than a destination of its own. There is no dedicated CRI Solar property. So the Rs.8-20 lakh a month is buying clicks into a generic fluid-management homepage whose hero carousel rotates awards banners, a product-registration link and a 360-degree virtual experience - none of which is solar. The buyer has to self-navigate from 'world's fastest-growing fluid management solution provider' to a solar pump. Most will not.

- **3. There is no PM-KUSUM subsidy content anywhere - and KUSUM is the entire reason this business exists.** The single most searched question from this audience is 'how much will the pump cost me after subsidy'. The answer is publicly defined and highly persuasive: **60% combined subsidy (30% central + 30% state) as standard, rising to 90% for SC/ST and Bundelkhand-priority farmers in UP**, with the farmer paying only 10-40%. In rupees that turns a 3 HP pump from roughly Rs.1.2-1.5 lakh into **Rs.24,000-45,000**, and a 5 HP from Rs.2.5-3 lakh into roughly **Rs.70,000-1.2 lakh**. CRI is an MNRE-empanelled vendor and can state this with authority. It states none of it. Competitors and state-agency aggregators are ranking for exactly these queries instead.
- **4. The scheme has a real deadline and the funnel is not using it.** On **28 March 2026** MNRE extended PM-KUSUM Phase 1 completion to **31 March 2027** for projects with PPAs or NTPs issued on or before 31 Dec 2025 - but for **Component B and Component C individual pump solarisation, commissioning is due by 30 September 2026**, which is roughly a fortnight from this audit. MNRE has signalled this is the final blanket relief, with further extensions case-by-case, while PM-KUSUM 2.0 remains un-notified. That is genuine, documentable urgency - the rarest asset in performance marketing - and it appears in none of the messaging. Unlike the false countdown some competitors run, this one is real and citable.
- **5. The best numbers in Indian solar pumping are sitting in press releases instead of creatives.** 1,81,000 systems commissioned. Rs.320 crore MSEDCL empanelment for 10,714 pumps. Rs.300 crore of earlier PM-KUSUM-3 orders across four states. 6,100 million kWh saved. 4.8 million tonnes of CO2 prevented. IoT-enabled remote monitoring with a 5-year warranty. A named chairman quote from G. Soundararajan. The Day-1 leak - 'zero case-study proof in ads' - is confirmed and understated: this is not a brand that lacks references, it is a brand whose references never left the newsroom. For a state-agency tender buyer, 1,81,000 installed units is the single most decisive fact available, and for a farmer, a 5-year warranty plus IoT monitoring answers the objection that actually kills solar-pump deals: what happens when it breaks.
- **6. No WhatsApp, no vernacular, for an audience that is WhatsApp-first and rarely reads English.** The funnel offers a Meta Lead Form and a corporate contact route. There is no WhatsApp entry point, no Tamil, Hindi or Marathi landing content, and no click-to-call sized for a farmer on a 4G phone - despite the Rs.320 crore order being in **Maharashtra** under the Marathi-named 'Magel Tyala Saur Krushi Pump' scheme, and despite UP and Rajasthan being the largest Component B markets. Lead-form leads from this segment also arrive without the two qualifiers that decide everything: state and HP requirement. Without those, the sales team cannot route to the right nodal-agency workflow.
- **7. Tracking is aimed at the wrong event, and the group site is leaking third-party scripts.** With a Lead Form objective and no on-site funnel, there are no mid-funnel signals to optimise against - no subsidy-calculator start, no HP selector, no spec-sheet download, no dealer-locator search. Meta is being asked to find buyers using nothing but raw form fills, which in an agri-subsidy category is the noisiest possible signal. Separately, the group homepage attempts to load a **Criteo retargeting script (gum.criteo.com)** that renders a visible **'gum.criteo.com is blocked ... ERR_BLOCKED_BY_CLIENT'** error block in the page body - a retargeting tag that is both failing and, when it fails, printing an error message to the customer.

6. COMPETITOR BENCHMARK

Dedicated solar site	KUSUM subsidy math	Case studies live	WhatsApp
No - crigroups.com subfolder	None	None (press only)	None
Yes - solar vertical	Yes	Yes - KUSUM projects	Yes
Yes	Yes	Yes	Yes
N/A	Yes - full slab tables	N/A	Yes

7. 3 QUICK WINS (Implement in 7 Days)

48 hours - put content on the page the ads point at

crigroups.com/solar-pump/ currently renders one photograph. Ship a real page this week: HP-wise table (1 to 10 HP) with benchmark cost and post-subsidy farmer share, the MNRE PM-KUSUM empanelment badge, the 5-year warranty and IoT monitoring, a downloadable spec sheet, and one enquiry form that captures state and HP. Add a WhatsApp number. Until that page exists, pause the lowest-performing creatives rather than keep paying to land people on an image.

7 days - lead with the subsidy number and the real deadline

Rebuild the top creatives around the only two things this buyer cares about. First, price after subsidy: a 3 HP pump for roughly Rs.24,000-45,000 against a benchmark of Rs.1.2-1.5 lakh, with the 60% standard and 90% SC/ST-Bundelkhand cases shown separately. Second, the clock: Component B and C-IPS commissioning is due 30 Sep 2026, with Phase 1 closing 31 Mar 2027 and KUSUM 2.0 not yet notified. That is real, citable urgency. Split campaigns by state so the subsidy figure quoted is actually the one that applies.

14 days - turn 1,81,000 pumps into the proof engine, in-language

Build 20 assets from evidence already published: 1,81,000 systems commissioned, the Rs.320 Cr MSEDCL award for 10,714 pumps, Rs.300 Cr of PM-KUSUM-3 orders across Haryana, UP, Maharashtra and Rajasthan, 6,100 million kWh saved, 4.8 million tonnes CO2 avoided, 60+ years, 22 plants, 120 countries. Run two tracks - a farmer track in Marathi, Hindi and Tamil built on cost-after-subsidy and the 5-year warranty, and a B2G / nodal-agency track built on installed-base scale and IoT monitoring, delivered via LinkedIn ABM rather than broad Meta. Fire distinct events for HP-selector, subsidy-calculator, spec-sheet download and WhatsApp-click, and fix the Criteo tag that is printing an error into the page.

EXPECTED IMPACT

Metric	Today (14 Sep 2026)	After 30 days
Solar page content	One photograph	HP table + subsidy + specs
Destination domain	crigroups.com subfolder	Dedicated CRI Solar page
Subsidy math shown	None	60-90% + rupee figures
KUSUM deadline used	Not mentioned	30 Sep / 31 Mar 2027 clock

Case studies in ads	0 of ~56	1,81,000 pumps as the hook
Vernacular + WhatsApp	None	Marathi/Hindi/Tamil + WA

READY TO PLUG THESE LEAKS?

CRI has the single best proof stack in this entire Day-1 list - 1,81,000 solar pumps, a Rs.320 Cr MSEDCL award, 6,100 million kWh saved - and a solar page with one photograph on it. Reply to this email or WhatsApp 7095024220 for a 15-minute walkthrough of the empty page, the missing subsidy math and the KUSUM deadline clock.
