Revenue

EXECUTIVE SUMMARY

Navitas Solar is a genuine Indian manufacturing success story - founded 2013 in Surat, now **3 GW of annual module capacity**, roughly **Rs.1,300 crore of FY26 revenue** (up from Rs.291 crore in FY24), a **Rs.1,500 crore investment announced in Jun 2026** to enter solar cell manufacturing with pilot wafer-ingot production, and clients including **Indian Oil, ONGC, Tata Power, GAIL and HP**. On 14 Sep 2026 its homepage displays those achievements as: **0 GW capacity, 0 years of experience, 0 satisfied customers, 0 employees, 0 countries**. An estimated 24 live creatives are pointing at it.

1. AD INTELLIGENCE

Live creatives	~24 active Meta ads (Day-1 estimate, 14 Sep 2026) at an estimated Rs.20 L+/month. Verify in Meta Ad Library India - and verify the spend, which looks high for a B2B module maker with no on-site conversion path.
Destination	Lead Form. The Day-1 domain navitassolar.in fails to connect entirely (SSL handshake error, no response); the live site is navitassolar.com . The Day-1 Google Ads Transparency link is therefore also pointed at a dead domain.
Instagram mismatch	The Day-1 record lists @navitassolar. The handle actually linked from the live site footer is @navitasgreen - a different name from the brand being advertised.
Real proof available	3 GW module capacity; Mono PERC, TOPCon, Bifacial and Multi-crystalline lines (40W-720W); subsidiary Navitas Alpha Renewables making encapsulants (backward integration); EPC arm Navitas Planet; energy storage via Renon India; 1,000+ clients; carbon-neutral organisation.
Corporate trajectory	FY22 Rs.161 Cr, FY23 Rs.202 Cr, FY24 Rs.291 Cr, FY25 ~Rs.643 Cr, FY26 ~Rs.1,300 Cr company-stated. Parishi Capital invested \$4.7M for the Ahmedabad 2.5 GW plant. ALMM List-II for cells operationalised 1 Jun 2026 - the reason the cell investment matters.

2-5. CREATIVE / COPY / CRO / TRACKING SCORES

Subsidy & Scheme Clarity		2/10
WhatsApp / Speed-to-Lead		3/10
Social Proof		3/10
Creative Variety		5/10
Landing / CRO		3/10
Tracking & Attribution		4/10

- **1. Every single achievement counter on the homepage renders as zero.** The 'Company Overview' band is built from six animated odometers and on 14 Sep 2026 all six display **0: 0 GW Annual Solar Module Capacity, 0+ Years of Industry Experience, 0+ Satisfied Customers Worldwide, 0+ Dedicated Employees Workforce, 0+ Countries' Market Presence, and 0 GW Solar Cell Capacity by 2026**. The script that should count them up is not firing. The paragraph directly above says 3 GW and 13 years - so the page contradicts itself within one screen, and the contradiction resolves in favour of zero, because numbers in a stat band are what visitors actually read. For a manufacturer whose entire B2B pitch is scale, this is the worst possible failure mode.

- **2. The domain in the Day-1 record is dead, and the ads may be pointing at it. navitassolar.in does not resolve** - the connection fails at the SSL handshake, with no response from either the bare host or the www subdomain. The live property is **navitassolar.com**. The Google Ads Transparency link in the lead record is built on the dead .in domain, which means any Google activity tracked against it is invisible. Before another rupee is spent, every creative destination, every UTM and every listing needs to be audited for which domain it actually carries.
- **3. The Day-1 leak is confirmed, and the deeper problem is that the funnel serves neither audience.** The stub flags homeowner-targeted ads running alongside C&I keyword bidding. The site makes that worse rather than resolving it: there is no residential path (no PM Surya Ghar page, no kW calculator, no subsidy slabs, no rooftop pricing) and no true B2B path either (no downloadable datasheets or IEC/BIS certificates on the homepage, no distributor or dealer application, no RFQ or bulk-quote form, no MOQ or lead-time information, no project case studies). Every route ends at the same generic 'Contact Us Now' button into a Lead Form. A homeowner cannot buy and a procurement head cannot specify.
- **4. A 'Solar Cells (Upcoming)' tile links to nothing, in the middle of the company's biggest announcement.** In the Core Offerings carousel, the Solar Cells card points at **navitassolar.com/#** - a dead anchor. This is the single most newsworthy thing about Navitas right now: a **Rs.1,500 crore** investment announced in June 2026 to enter cell manufacturing with pilot wafer and ingot production, timed to **ALMM List-II for cells becoming operational on 1 June 2026**, which forces government-backed projects toward domestic cells. Developers are actively searching for who will have Indian cells. Navitas has the answer, has funded it, and links it to a hash.
- **5. The capacity number changes depending on where you look - including inside the company's own materials.** The homepage says **3 GW**. The credit-rating summary for Navitas Green Solutions says **2 GW**. Inc42's profile still says **500 MW expanding to 1.7 GW**. Mercom reports the Ahmedabad plant going to **2.5 GW**. Revenue is similarly split: the company told the press about **Rs.1,300 crore in FY26**, while an unlisted-share research note projects **Rs.2,387 crore** for the same year. For a business courting institutional buyers, distributors and quite possibly public markets, having four live capacity figures in circulation is a due-diligence problem before it is a marketing one. Pick one, date it, and publish it as the canonical number.
- **6. The awards wall is the largest element on the page and the least usable.** There are roughly twenty award images stacked with **no filtering, no dates in the layout, no explanatory text and no ordering** - and several are duplicated (the same MSME Excellence award twice, Gold Award June 2022 twice, the Suryacon Youth Leadership award three times). Their filenames are stored with **Unicode bold-math characters** and some carry a **double .jpg.jpg extension**, which means alt text is effectively unreadable and the images are invisible to search. Most of the awards are from 2022 and 2023; the strongest and most recent - **Solar Module Manufacturer of the Year, Chhattisgarh, January 2026** and **Best Solar Product Innovation Award, Global Solar Expo, November 2025** - are buried in the middle of the pile rather than leading it.
- **7. Speed-to-lead and attribution are both unmanaged.** One phone number (+91 70 690 70 990) and one email sit in the header; there is **no WhatsApp**, no chat, no callback scheduler and no stated response time - for a category where a distributor enquiry or a 500 kW rooftop RFQ is worth lakhs and goes to whoever answers first. With a Lead Form objective and no on-site funnel, there are no mid-funnel events to optimise against: no datasheet download, no product-series view, no EPC enquiry, no distributor-application start. Meta is being handed raw form fills as its only signal, on an estimated Rs.20 lakh a month.

6. COMPETITOR BENCHMARK

Counters render	Datasheets on site	Cell roadmap page	Distributor
All six show 0	No	Links to '#'	None
Yes	Yes - full library	Yes	Yes
Yes	Yes	Yes	Yes
Yes	Yes	Yes	Yes

7. 3 QUICK WINS (Implement in 7 Days)

48 hours - fix the zeros, fix the domain, fix the dead link

Repair or hard-code the six counters so the page reads 3 GW, 13+ years and the real customer, employee and country figures - a static number beats an animated zero every time. Audit every ad destination and UTM for navitassolar.in and repoint to navitassolar.com, or restore the .in domain and 301 it. Point the 'Solar Cells (Upcoming)' tile at a real page instead of '#'. Correct the Instagram handle discrepancy between @navitassolar and @navitasgreen.

7 days - build the cell-manufacturing page and split the two audiences

ALMM List-II went live on 1 June 2026 and developers are hunting for domestic cells right now. Ship one page on the Rs.1,500 crore cell and wafer-ingot investment with a timeline, target capacity and an 'early supply enquiry' form - that is the highest-intent B2B traffic available to you this quarter. Then separate the funnels: a B2B track with downloadable datasheets, IEC/BIS certificates, MOQ and lead times, a distributor application and an RFQ form; and a residential track with PM Surya Ghar slabs (Rs.30,000 / Rs.60,000 / Rs.78,000) and a kW calculator, routed through Navitas Planet. Stop paying for homeowner clicks that land on a module-manufacturer homepage.

14 days - turn the client list and the growth curve into creative

Build 20 assets from proof you already own: Indian Oil, ONGC, Tata Power, GAIL and HP as clients; 3 GW capacity; revenue from Rs.291 Cr in FY24 to ~Rs.1,300 Cr in FY26; full integration from encapsulants (Navitas Alpha) through modules to EPC (Navitas Planet) and storage (Renon); Solar Module Manufacturer of the Year Chhattisgarh Jan 2026; carbon-neutral status. Lead the awards wall with the two 2026 and late-2025 wins and cut the duplicates. Run the B2B track on LinkedIn ABM against EPC firms, developers and distributors rather than broad Meta, add WhatsApp with a stated response time, and fire distinct events for datasheet-download, distributor-application and cell-enquiry.

EXPECTED IMPACT

Metric	Today (14 Sep 2026)	After 30 days
Homepage counters	All six render 0	3 GW, 13+ yrs, real figures

Day-1 domain	navitassolar.in dead	Canonical .com everywhere
Solar cell page	Tile links to '#'	Live page + supply enquiry
B2B assets	No datasheets or RFQ	Datasheets, MOQ, distributor form
Capacity claim	4 conflicting figures	One dated canonical number
WhatsApp / response time	None stated	WA + published SLA

READY TO PLUG THESE LEAKS?

Navitas is about to put Rs.1,500 crore into solar cell manufacturing while its homepage tells visitors it has 0 GW of capacity and 0 customers. Reply to this email or WhatsApp 7095024220 for a 15-minute walkthrough of the counter bug, the dead domain and the B2B funnel that has no B2B in it.
