EXECUTIVE SUMMARY

SolarSquare is the strongest brand in this Day-1 cohort by a distance - **\$53M Series C led by B Capital (16 Jun 2026), \$100M+ raised, ~50,000 homes, Rs.1,000 Cr+ revenue run-rate, 4.8 on Google from 15,000+ ratings**. Which is exactly why the findings below matter: this is not a brand that lacks proof, it is a brand whose **live homepage is printing its proof as the number zero**. Everything here was observed on solarsquare.in on 14 Sep 2026.

1. AD INTELLIGENCE

Live creatives	~13 active Meta ads (Day-1 estimate, 14 Sep 2026) - the largest creative pool in this cohort. Verify in Meta Ad Library India.
Destination	Phone Call objective - strong for a full-stack closer, but it bypasses the on-site calculator and the 3D-design hook that actually differentiate the brand.
Funnel assets	Genuinely best-in-class: pincode + bill solar calculator, free 3D rooftop design, Experience Centre booking, real-time monitoring app on Play Store, Refer & Earn, webinars, Solar Pro partner programme, and ~60 city landing pages.
Positioning	GoodZero - 'India's only Guaranteed Solar Savings Plan' with generation guarantee or Rs.8/unit money back, Rs.0 repair and replacement, WindPro Mount tested to 170 kmph and approved by IIT Bombay.
Scale	31 cities across 10 states. Founded 2015 by Shreya Mishra, Neeraj Jain and Nikhil Nahar. Backers: B Capital, Lightspeed, Elevation, Lowercarbon, Rainmatter by Zerodha, Good Capital.

2-5. CREATIVE / COPY / CRO / TRACKING SCORES

Subsidy & Scheme Clarity		8/10
WhatsApp / Speed-to-Lead		4/10
Social Proof		5/10
Creative Variety		7/10
Landing / CRO		4/10
Tracking & Attribution		6/10

- **1. The homepage social-proof counters render as 0 - all four of them.** This is the single most expensive bug on the site. Under 'Powering Homes Across India', the live page on 14 Sep 2026 shows '**0 + Homes Solarized, 0 + MW Power Installed, 0 + Cr Subsidy Delivered, and 0 Home Solar On National Portal**'. These are odometer widgets that animate on scroll and are failing to populate, so a visitor arriving from a Rs.500-a-click ad sees a solar company advertising that it has solarized zero homes. The true numbers - ~50,000 homes, Rs.1,000 Cr+ run-rate, India's largest residential rooftop portfolio - are the company's entire competitive moat, and the hero section of the site is actively contradicting them. Every rupee of paid traffic is landing on this.

- **2. The subsidy page runs a countdown clock that misrepresents the scheme - and it is a compliance risk, not just a CRO one.** The PM Surya Ghar page opens with '**Hurry Up! This Scheme Ends Soon**' and a live ticking timer reading **198 days, 15 hours, 56 mins** to a 'Last day to Avail the offer: March 31, 2027'. PM Surya Ghar is a Rs.75,021 crore central scheme targeting one crore households; 31 Mar 2027 is a fiscal-year boundary for the current sanction, not an announced closure of the subsidy. Presenting a government scheme as expiring in 198 days to manufacture urgency is the kind of claim that draws ASCI complaints and Meta ad rejections - and for a category-leading, VC-backed brand heading toward an IPO narrative, that is a disproportionate risk for a few extra leads. The rest of the page is excellent (correct Rs.78,000 ceiling, DBT explained, 'no agents, no commissions, no hidden deductions'), which makes the countdown the one thing worth deleting.

- **3. The Day-1 leak is real but has moved: the page is heavy, and the calculator is a dead end for most visitors.** The homepage pulls large .webp hero assets from two different CDN hosts (cdn.solarsquare.in and dn5z2jafg7hv0.cloudfront.net), loads separate desktop and mobile heroes, an embedded YouTube testimonial, an animated map, an app preview and an odometer library - which is where the 4s+ mobile 4G load originates. Worse, the pincode calculator's failure state is a hard stop: **'Oh! We haven't reached your location yet'**. With 31 cities live, a large share of the paid traffic from a national campaign hits that wall and leaves with nothing - no waitlist capture, no email, no notify-me. You pay for the click, discover the lead is out of area, and then let them go without capturing the data.
- **4. The city navigation has cities filed under the wrong state - twice, in the primary menu.** Under **Maharashtra**, the live dropdown lists **Bhopal** and **Gwalior** as the first two entries. Both are Madhya Pradesh cities, and both are also correctly listed under the Madhya Pradesh dropdown on the same menu. This is a copy-paste error in the highest-traffic navigation element on a site with roughly 60 city landing pages, and it damages exactly the local-intent SEO those pages exist to win.
- **5. There is no WhatsApp anywhere in the funnel, in a category where WhatsApp is the default channel.** The site offers Phone Call ads, a 'Get a FREE Consultation' form, 'Schedule a FREE Visit' and 'Book My Visit' - all of which require the customer to commit to a scheduled interaction with a salesperson. There is no low-friction chat option. Every other brand in this cohort has a WhatsApp entry point; a homeowner researching a Rs.2-4 lakh purchase at 10pm has no way to ask one question. Phone-call-only also means speed-to-lead is capped by call-centre hours, and it forfeits the cheapest re-engagement channel available in India.
- **6. The proof that is displayed is thin next to the proof that exists.** The homepage carries three text testimonials (Santosh Singh, Dr. Sudhakar Shukla, Samir Patil) and one YouTube video (Mahendra Thakre, 'bills down from Rs.4000 to Rs.300'). That is four customers shown out of ~50,000 served and 15,000+ Google ratings. The strongest quantified line on the page - 'bills dropped from Rs.18,000 to Rs.0, 50-55 units generated daily' - is buried in a carousel rather than being the creative. The '90% of our customers recommend us' stat has no source or sample attached to it.
- **7. Two claims need a visible substantiation line before a competitor forces one.** The page title asserts **'Bharat ki #1 Home Rooftop Solar Company'** and the trust block asserts **'India's only solar company that offers a Savings Guarantee with a money-back promise'**. Both are defensible given the company's scale and the GoodZero structure - but neither carries a footnote, a basis, or a dated source on the page. Superlative and exclusivity claims of this kind are the most commonly challenged under ASCI, and the fix is a one-line asterisk, not a retreat from the positioning.

6. COMPETITOR BENCHMARK

Subsidy page	Calculator	WhatsApp	Counters
Yes - correct slabs	Yes - pincode + bill	None	Broken (sh
Yes - but 40% error	Yes - savings report	Two numbers	OK
Yes - 40% error	Yes	Yes	OK
None	None	Broken link	N/A

7. 3 QUICK WINS (Implement in 7 Days)

48 hours - fix the zeros and kill the countdown

Repair the odometer so the homepage prints 50,000+ homes, the real MW figure and the real subsidy crore figure - or hard-code them as static text until the script is fixed. A static number always beats an animated zero. Delete the 'This Scheme Ends Soon' countdown from the PM Surya Ghar page and replace it with 'Subsidy is first-come, first-served against a national target' which is both true and urgent. Move Bhopal and Gwalior out of the Maharashtra menu.

7 days - add WhatsApp and stop losing out-of-area traffic

Put one attributable WhatsApp number on the site and in every creative with a pre-filled message carrying the city and ad ID. Change the calculator's out-of-area state from a dead end into a capture: 'We are not in your city yet - leave your number and we will tell you the week we launch.' Those numbers become the launch list for cities 32 through 45, paid for by budget you have already spent. Add a static substantiation footnote under the #1 and 'only savings guarantee' claims.

14 days - convert the asset library into creative and cut national waste

You are sitting on the best raw material in the category and showing four customers. Build 20 assets: the Rs.18,000-to-Rs.0 bill story, the Rs.8/unit money-back guarantee, WindPro Mount at 170 kmph with the IIT Bombay approval, the free 3D design, the monitoring app, the Experience Centre walkthrough. Then geo-fence every campaign to the 31 live cities only, point ads at the city landing pages instead of a phone-call objective, and fire distinct events for calculator-start, calculator-complete, 3D-design-request and Experience-Centre-booking so the Series C money is optimising against mid-funnel intent rather than raw calls.

EXPECTED IMPACT

Metric	Today (14 Sep 2026)	After 30 days
Homepage counters	All four render 0	50,000+ homes, real MW
Subsidy urgency	False 198-day countdown	Accurate, compliant framing
Out-of-area visitors	Dead end, no capture	Waitlist for next 14 cities
WhatsApp	None	One attributable number
Customers shown	4	20+ across 2 angles
Menu accuracy	Bhopal/Gwalior under MH	Correct state mapping

READY TO PLUG THESE LEAKS?

SolarSquare does not need a new marketing story - the story is already the best in the category. It needs the homepage to stop printing zeros over it. Reply to this email or WhatsApp 7095024220 for a 15-minute walkthrough of the render bug, the countdown risk and the city-page waste.
