

PAID MEDIA & MEASUREMENT AUDIT

Akshayakalpa Organic

Paid media and measurement audit. The largest paid footprint in this group meets a site carrying a placeholder international address in its footer.

Report generated 2 October 2026

CONTENTS

What is in this report

01 How this audit was produced

Sources, method and the limits of what was measured

02 The ad account

Live paid inventory and measurement surface as measured on the crawl date.

03 Findings

6 issues, each with the measurement behind it

04 Opportunity score

Five weighted dimensions, scored from measured values only

05 Suggested next steps

Ordered by effort against likely impact

01 METHOD

How this audit was produced

- Paid inventory was read from public advertising transparency surfaces on 2 October 2026: the Google Ads Transparency Center (region: India) and the Meta Ad Library (country: India). Ad counts are live counts for the brand term on the day of the crawl.
- The website's platform, response headers, redirect chain and measurement tags were inspected live on 2 October 2026 on the site root of akshayakalpa.org. Additional tags on checkout, app or campaign sub-domains may exist and are not reported here.
- Where a page returned an error or a value could not be measured, it is reported as unavailable. Nothing has been inferred to fill a gap.
- Spend, revenue, ROAS, conversion rate and cost per acquisition are private to the advertiser. They were not estimated, and are marked unavailable throughout.
- This is a one-day snapshot. Ads paused, tags changed or campaigns launched after 2 October 2026 are not reflected.
- Meta ad activity was verified individually in the Ad Library on the crawl date, including the running-since dates of specific creatives.

02 LIVE PAID INVENTORY DATA

The ad account

Ad platforms observed	Google (≈400 creatives, region India) · Meta (verified live ads)
Meta ads verified	3 live creatives from the brand page, running since 19 May 2026 (2 creatives, 2 variants each) and 24 Jun 2026 (1 creative, 2 variants)
Meta library IDs	2186726058790625 · 935934206094801 · 958522520368361 (all from the brand page)
Third-party distribution	Swiggy Instamart runs Akshayakalpa product creative (library ID 3384075765110108, started 12 Aug 2026, 9 variants); Zepto placements also appear under the term
Site platform	Apache 2.4.52 (Ubuntu) with WordPress; no CDN, no cache-control, no HSTS observed
Spend · ROAS · CPA	unavailable (private to the advertiser)
Crawl date	2 October 2026

COVERAGE

What was measured, and what was not

SURFACE	STATUS	METHOD
Google creative inventory	MEASURED — 400	Google Ads Transparency Center (region India), 2 October 2026
Meta ad inventory	MEASURED — 3	Meta Ad Library (country India), 2 October 2026
Measurement tags	NOT MEASURED	HTML inspection of the site root, 2 October 2026
Site platform and headers	MEASURED	Live HTTP response of the site root, 2 October 2026
Checkout and order flow	NOT MEASURED	outside the site root; not crawled
Ad spend, ROAS, CPA	UNAVAILABLE	private to the advertiser; no public source
Published commercial figures	MEASURED	the brand's own published pages and results, as reported

Surfaces marked NOT MEASURED are outside the scope of a public crawl. They are listed so the reader can see exactly where this report's knowledge stops — no value has been estimated to fill them.

03 6 ISSUES, RANKED BY SEVERITY

Findings

CRITICAL

1. The Contact Us page carries an international template placeholder

```
page: akshayakalpa.org/contact-us
text: "0123.456.789 - 2 Queen Street, California, USA"
homepage: correct Tiptur, Karnataka address published
```

The Contact Us page a paid visitor can reach still shows a US placeholder phone number and address, while the site footer shows the correct Tiptur address. On a site selling dairy subscriptions, that inconsistency costs trust and takes minutes to correct.

HIGH

2. The largest paid footprint in the category runs on an uncached, CDN-less server

```
server: Apache/2.4.52 (Ubuntu) + WordPress
cache-control: absent
strict-transport-security: absent
cdn: none observed
```

Roughly four hundred creatives send traffic into a server with no cache layer. Measured at the origin, this is the slowest configuration in this group of eleven, and slow origins depress landing-page conversion regardless of creative quality.

HIGH

3. Meta ads are live and verifiable, but no on-site tag could be confirmed from the root

```
meta ads: 3 live creatives from the brand page (19 May and 24 Jun 2026)
third-party: Swiggy Instamart creative, 9 variants (12 Aug 2026)
site root: no meta pixel selector resolved on the crawl
method: single-method result – not asserted as absence
```

Spend is proven live on Meta. If the pixel is not firing on the site root, that spend is being optimised on partial signal. A two-minute browser check with a pixel helper settles it.

MEDIUM

4. The brand is being sold through third-party distribution creative as well as its own

```
creative observed: Swiggy Instamart – Akshayakalpa paneer, 9 variants (12 Aug 2026)
creative observed: Zepto – quick-commerce placements under the term
brand page: 3 creatives, running since 19 May 2026
```

Quick-commerce placements sell the product but own the customer relationship. Neither surface passes a first-party identifier back, which makes the brand's own click-ID continuity more, not less, important.

LOW

5. Meta creative is farm-to-door storytelling, consistently executed

```
creative 1: 'Milk from healthy cows fed on organic fodder grown in chemical free soil.'
creative 2: 'From nutritious soil to healthy cows, we ensure every drop of milk is pure and organic.'
creative 3: high-protein paneer, organic milk and curd
```

The creative platform is coherent across months. The gap is not in the message; it is in what happens after the click.

NOTE

6. Commercial scale is real and publicly stated

published: approx Rs 45-46 Cr monthly run-rate
published: FY26 target approx Rs 550 Cr
certification: APEDA-certified organic

This is not a brand testing paid media. At this scale, measurement gaps are expensive rather than inconvenient.

03 FINDINGS · EVIDENCE REGISTER

Where every number in this report came from

MEASUREMENT	SOURCE	VALUE OBSERVED	DATE
Google creatives	Google Ads Transparency Center (region India)	≈400 creatives, region India	2 October 2026
Meta ads	Meta Ad Library (country India)	3 live creatives from the brand page, running since 19 May 2026 (2 creatives, 2 variants each) and 24 Jun 2026 (1 creative, 2 variants)	2 October 2026
Measurement tags on the site root	HTML inspection of the site root	not measured	2 October 2026
Site platform and headers	Live HTTP response of the site root	Apache 2.4.52 (Ubuntu) with WordPress; no CDN, no cache-control, no HSTS observed	2 October 2026
Published contact	The brand's own contact and policy pages	none published on the pages reviewed	2 October 2026
Ad spend / ROAS / CPA	No public source exists	unavailable — not estimated	2 October 2026
Published commercial figures	The brand's own published pages and results	published: approx Rs 45-46 Cr monthly run-rate	2 October 2026

Every row above is a readable public surface. Where a row reads unavailable or not measured, that is exactly what was found — the report does not substitute an estimate.

04 SCORED FROM MEASURED VALUES ONLY

Opportunity score

Measurement integrity		3 / 4
Meta spend verified live; site tag not confirmed by one method.		
Conversion observability		2 / 4
No confirmed on-site pixel or server-side path.		
Brand consistency		1 / 4
Placeholder international contact block on the Contact Us page.		
Technical health		1 / 4
No CDN, no cache layer, no HSTS on the largest spender.		
Commercial fit		4 / 4
Category leader, publicly stated growth target, live paid spend.		

OVERALL

11 / 20

5 of 5 dimensions scored

C — serious paid spend meeting fixable configuration problems

QUALIFICATION

Read this before acting on it

Meta activity in this report was verified ad by ad and is reliable. Google inventory is a live count for the brand term. The tag layer was probed by one method only and returned nothing — that is reported as unconfirmed, not as absent, because Shopify and WordPress stacks commonly inject tags through scripts a static fetch cannot see. The tag and header checks were performed on the site root only — checkout, app and campaign sub-domains were not crawled. Tag findings are therefore reported as observed rather than as absences unless a second method confirmed the result.

05 ORDERED BY EFFORT AGAINST IMPACT

Suggested next steps

1

LOW EFFORT · IMMEDIATE BENEFIT

Replace the placeholder contact block today

The Contact Us page currently shows a US placeholder address and phone number. Correcting it takes minutes and removes a trust cost from a page paid traffic can reach.

2

UNDER AN HOUR

Confirm the Meta pixel in a browser

Open the site with a pixel helper and confirm which pixel fires and on which pages. This one check decides whether the Meta spend above is measurable.

3

HALF A DAY · BIGGEST SINGLE WIN

Put a cache layer in front of the origin

A CDN plus cache-control headers in front of an Apache origin is a configuration change. It is the highest-leverage speed fix available to a subscriber business.

4

UNDER AN HOUR

Turn on HSTS and basic response headers

One server directive. It protects subscriber traffic and costs nothing per month.

5

LOW EFFORT

Decide what a subscription click is worth

Trials, subscriptions and one-off orders need separate conversion definitions before the next campaign flight, or the algorithm will optimise for the wrong action.

NEXT STEP

Happy to walk through any of this on a short call.

7095024220

Nothing here requires new tooling. The first items are configuration, not rebuilds.
