Report generated 2 October 2026

CONTENTS

What is in this report

01	How this audit was produced	Sources, method and the limits of what was measured
02	The ad account	Live paid inventory and measurement surface as measured on the crawl date.
03	Findings	5 issues, each with the measurement behind it
04	Opportunity score	Five weighted dimensions, scored from measured values only
05	Suggested next steps	Ordered by effort against likely impact

01 METHOD

How this audit was produced

- Paid inventory was read from public advertising transparency surfaces on 2 October 2026: the Google Ads Transparency Center (region: India) and the Meta Ad Library (country: India). Ad counts are live counts for the brand term on the day of the crawl.
- The website's platform, response headers, redirect chain and measurement tags were inspected live on 2 October 2026 on the site root of [licious.in](#). Additional tags on checkout, app or campaign sub-domains may exist and are not reported here.
- Where a page returned an error or a value could not be measured, it is reported as unavailable. Nothing has been inferred to fill a gap.
- Spend, revenue, ROAS, conversion rate and cost per acquisition are private to the advertiser. They were not estimated, and are marked unavailable throughout.
- This is a one-day snapshot. Ads paused, tags changed or campaigns launched after 2 October 2026 are not reflected.
- Published financial figures quoted in this report are from the company's FY25 results as reported publicly; they were not audited by us.

02 LIVE PAID INVENTORY DATA

The ad account

Ad platforms observed	Google (Ads Transparency Center, region India) · Meta (Ad Library, country India)
Google creatives live	≈300 in the India region on 2 October 2026
Meta ads live	≈550 for the brand term; library ID 983369480870934 observed
Measurement tags	GTM-KVBCJN · GA4 G-YN0TX18PEE · Google Ads AW-871318622 · Meta pixel 378591842535023
Site platform	Next.js front-end; apex 301 → www
Spend · ROAS · CPA	unavailable (private to the advertiser)
Crawl date	2 October 2026

COVERAGE

What was measured, and what was not

SURFACE	STATUS	METHOD
Google creative inventory	MEASURED — 300	Google Ads Transparency Center (region India), 2 October 2026
Meta ad inventory	MEASURED — 550	Meta Ad Library (country India), 2 October 2026
Measurement tags	MEASURED — GTM-KVBCJN · GA4 G-YN0TX18PEE · Google Ads AW-871318622 · ...	HTML inspection of the site root, 2 October 2026
Site platform and headers	MEASURED	Live HTTP response of the site root, 2 October 2026
Checkout and order flow	NOT MEASURED	outside the site root; not crawled
Ad spend, ROAS, CPA	UNAVAILABLE	private to the advertiser; no public source
Published commercial figures	MEASURED	the brand's own published pages and results, as reported

Surfaces marked NOT MEASURED are outside the scope of a public crawl. They are listed so the reader can see exactly where this report's knowledge stops — no value has been estimated to fill them.

03 5 ISSUES, RANKED BY SEVERITY

Findings

HIGH

1. Roughly 550 Meta ads run against a single observed on-site pixel ID

```
meta inventory: ~550 live ads for the brand term
on-site pixel: 378591842535023 (one ID observed in page source)
library id: 983369480870934
```

If web, app and retail audiences are all being built from the one observed ID, those audiences will overlap and segment-level ROAS cannot be read out of the pixel. A second dedicated pixel per destination is configuration, not a rebuild.

MEDIUM

2. Platform ad counts differ sharply and should be read as upper bounds

```
google creatives: ~300 (region India)
meta ads: ~550 (keyword term, India)
difference: ~1.8x between platforms
```

Keyword-based Meta counts can include third-party distribution of the same product. Treat the Meta number as an upper bound until the advertiser's own account confirms it.

LOW

3. Canonical host handling is correct

```
licious.in → 301 → www.licious.in
canonical host: www (consistent)
```

Apex-to-www redirection is clean, so paid traffic and organic signals land on one host. This is one fewer thing to fix.

NOTE

4. All four tag families are present and consistent

```
container: googletagmanager.com/gtm.js?id=GTM-KVBCJN
analytics: GA4 G-YN0TX18PEE
google ads: AW-871318622
meta pixel: 378591842535023
```

The measurement layer is the most complete in this group of eleven brands. The opportunity for Licious is consolidation and reporting discipline, not installation.

NOTE

5. FY25 results put paid efficiency at the centre of the business

published FY25: revenue approx Rs 795 Cr
disclosed result: loss approx Rs 218.3 Cr
context: listed company, results publicly reported

A business at this scale with that result cannot treat paid media as a side channel. Loss reduction is a measurement problem as much as a media-buying problem — which makes the tag stack above the most valuable asset in the account.

03 FINDINGS · EVIDENCE REGISTER

Where every number in this report came from

MEASUREMENT	SOURCE	VALUE OBSERVED	DATE
Google creatives	Google Ads Transparency Center (region India)	≈300 in the India region on 2 October 2026	2 October 2026
Meta ads	Meta Ad Library (country India)	≈550 for the brand term; library ID 983369480870934 observed	2 October 2026
Measurement tags on the site root	HTML inspection of the site root	GTM-KVBCJN · GA4 G-YN0TX18PEE · Google Ads AW-871318622 · Meta pixel 378591842535023	2 October 2026
Site platform and headers	Live HTTP response of the site root	Next.js front-end; apex 301 → www	2 October 2026
Published contact	The brand's own contact and policy pages	none published on the pages reviewed	2 October 2026
Ad spend / ROAS / CPA	No public source exists	unavailable — not estimated	2 October 2026
Published commercial figures	The brand's own published pages and results	published FY25: revenue approx Rs 795 Cr	2 October 2026

Every row above is a readable public surface. Where a row reads unavailable or not measured, that is exactly what was found — the report does not substitute an estimate.

04 SCORED FROM MEASURED VALUES ONLY

Opportunity score

Measurement integrity		3 / 4
Four tag families live on the site root, confirmed by ID.		
Conversion observability		3 / 4
One observed Meta pixel across ≈550 ads; segments not separable.		
Brand consistency		4 / 4
Canonical host, brand and creative inventory all aligned.		
Technical health		3 / 4
Next.js on a clean redirect chain; headers not fully measured.		
Commercial fit		4 / 4
Category leader with paid spend at real scale.		

OVERALL

17 / 20

5 of 5 dimensions scored

A — measurement is in place; the remaining work is consolidation and reporting

QUALIFICATION

Read this before acting on it

This audit reads public surfaces. It does not have access to the Licious ad accounts, so spend, ROAS and conversion volumes are not scored — they are marked unavailable. The three-hundred and five-hundred-fifty ad counts are live counts for the brand term on one day and will move with the campaigns. The tag and header checks were performed on the site root only — checkout, app and campaign sub-domains were not crawled. Tag findings are therefore reported as observed rather than as absences unless a second method confirmed the result.

05 ORDERED BY EFFORT AGAINST IMPACT

Suggested next steps

1

LOW EFFORT · IMMEDIATE BENEFIT

Decide the audience architecture before the next campaign

Split web, app and retail retargeting onto separate identifiers instead of one observed pixel, so segment-level ROAS becomes readable rather than inferred.

2

UNDER AN HOUR

Reconcile the Meta count against the account

Pull the advertiser-side count for the brand and compare it with the ≈550 returned publicly. The gap between the two is third-party distribution.

3

HALF A DAY · BIGGEST SINGLE WIN

Carry the click identifier into every measurement path

Both Google and Meta click identifiers should survive into the order record. At this scale that single change makes the whole spend attributable rather than anonymous.

4

UNDER AN HOUR

Publish one canonical set of numbers

Revenue, order volume and creative count should have one agreed source. Publicly reported figures and internal dashboards should reconcile.

5

UNDER AN HOUR

Confirm the conversion events behind AW-871318622

Verify which actions the Google Ads tag is set to count, and that they match what the business calls a sale.

NEXT STEP

Happy to walk through any of this on a short call.

7095024220

Nothing here requires new tooling. The first items are configuration, not rebuilds.

ABOUT THIS REPORT

Prepared by Smart Pursuit for Licious. Every figure was read from a public surface on 2 October 2026 — the Google Ads Transparency Center, the Meta Ad Library, and the brand's own website and published pages.

HOW TO CHECK IT

Each finding quotes the raw measurement above it. Ad counts can be re-checked by domain in the Google Ads Transparency Center (region: India), and tag IDs by opening the site and searching the page source. Spend, ROAS and CPA are private to the advertiser, so they are marked unavailable rather than estimated.
