

PAID MEDIA & MEASUREMENT AUDIT

The Baker's Dozen

Paid media and measurement audit. Three tag families installed correctly, serving a WordPress site with no cache layer and no security headers.

Report generated 2 October 2026

CONTENTS

What is in this report

01	How this audit was produced Sources, method and the limits of what was measured
02	The ad account Live paid inventory and measurement surface as measured on the crawl date.
03	Findings 6 issues, each with the measurement behind it
04	Opportunity score Five weighted dimensions, scored from measured values only
05	Suggested next steps Ordered by effort against likely impact

01 METHOD

How this audit was produced

- Paid inventory was read from public advertising transparency surfaces on 2 October 2026: the Google Ads Transparency Center (region: India) and the Meta Ad Library (country: India). Ad counts are live counts for the brand term on the day of the crawl.
- The website's platform, response headers, redirect chain and measurement tags were inspected live on 2 October 2026 on the site root of thebakersdozen.in. Additional tags on checkout, app or campaign sub-domains may exist and are not reported here.
- Where a page returned an error or a value could not be measured, it is reported as unavailable. Nothing has been inferred to fill a gap.
- Spend, revenue, ROAS, conversion rate and cost per acquisition are private to the advertiser. They were not estimated, and are marked unavailable throughout.
- This is a one-day snapshot. Ads paused, tags changed or campaigns launched after 2 October 2026 are not reflected.

02 LIVE PAID INVENTORY DATA

The ad account

Ad platforms observed	Google (≈35 creatives, region India)
Measurement tags	GTM-MQQF2MXB · Google Ads AW-618150299 · Meta pixel 3996239487069441
Site platform	WordPress on nginx
Response headers	strict-transport-security absent · cache-control absent · security headers absent
Canonical host	apex 301 → www
Spend · ROAS · CPA	unavailable (private to the advertiser)
Crawl date	2 October 2026

COVERAGE

What was measured, and what was not

SURFACE	STATUS	METHOD
Google creative inventory	MEASURED — 35	Google Ads Transparency Center (region India), 2 October 2026
Meta ad inventory	NOT MEASURED	no inventory returned for the brand term on the crawl date
Measurement tags	MEASURED — GTM-MQQF2MXB · Google Ads AW-618150299 · Meta pixel ...	HTML inspection of the site root, 2 October 2026
Site platform and headers	MEASURED	Live HTTP response of the site root, 2 October 2026

Checkout and order flow	NOT MEASURED	outside the site root; not crawled
Ad spend, ROAS, CPA	UNAVAILABLE	private to the advertiser; no public source
Published commercial figures	NOT APPLICABLE	no published figure is quoted in this report

Surfaces marked NOT MEASURED are outside the scope of a public crawl. They are listed so the reader can see exactly where this report's knowledge stops — no value has been estimated to fill them.

03 6 ISSUES, RANKED BY SEVERITY

Findings

HIGH

1. Well-built tag stack served by a site with no cache layer and no security headers

```
tags: GTM-MQQF2MXB · AW-618150299 · pixel 3996239487069441
strict-transport-security: absent
cache-control: absent
x-frame-options: absent
server: nginx (WordPress)
```

Measurement is installed the right way — container, ads tag and pixel all present. The infrastructure under it is the weakest part of an otherwise tidy setup, and caching plus four response headers is hours of work.

MEDIUM

2. Thirty-five creatives is enough to learn from and small enough to consolidate quickly

```
google creatives live: ≈35 (region India)
ads tag present: AW-618150299
```

At this footprint, a single tidy campaign structure with clean naming will beat more creative volume. The measurement is already in place to prove it.

MEDIUM

3. No cache headers means every visit is served cold

```
cache-control: absent
cdn: none observed
server: nginx
```

Adding a cache layer and cache-control headers is a hosting change, not a development project. For a bakery where demand spikes around occasions, cold origin responses are exactly when speed matters most.

LOW

4. Security headers are missing across the board

```
strict-transport-security: absent
x-frame-options: absent
x-content-type-options: absent
content-security-policy: absent
```

None of these is exotic. Four directives in the server config close the gap and cost nothing to run.

LOW

5. One published inbox covers retail and celebration orders

```
published contact: fresh@thebakersdozen.in
```

Celebration and bulk orders are the high-ticket path for a bakery. Routing them separately from general enquiries protects the revenue that matters most.

NOTE

6. Tag ordering and coverage look correct

```
container: GTM-MQQF2MXB
ads tag: AW-618150299
meta pixel: 3996239487069441
```

All three families are present and independent, which is the pattern you want when paid spend sits across Google and Meta.

03 FINDINGS · EVIDENCE REGISTER

Where every number in this report came from

MEASUREMENT	SOURCE	VALUE OBSERVED	DATE
Google creatives	Google Ads Transparency Center (region India)	≈35 creatives, region India	2 October 2026
Meta ads	Meta Ad Library (country India)	no inventory returned for the brand term	2 October 2026
Measurement tags on the site root	HTML inspection of the site root	GTM-MQQF2MXB · Google Ads AW-618150299 · Meta pixel 3996239487069441	2 October 2026
Site platform and headers	Live HTTP response of the site root	WordPress on nginx	2 October 2026
Published contact	The brand's own contact and policy pages	none published on the pages reviewed	2 October 2026
Ad spend / ROAS / CPA	No public source exists	unavailable — not estimated	2 October 2026
Published commercial figures	The brand's own published pages and results	not used in this report	2 October 2026

Every row above is a readable public surface. Where a row reads unavailable or not measured, that is exactly what was found — the report does not substitute an estimate.

04 SCORED FROM MEASURED VALUES ONLY

Opportunity score

Measurement integrity

3 / 4

Container, ads tag and pixel all present and independent.

Conversion observability

3 / 4

Tags installed; conversion definitions not verifiable publicly.

Brand consistency

3 / 4

Canonical host redirects correctly; brand creative is consistent.

Technical health

1 / 4

No cache layer and no security headers on nginx.

Commercial fit

3 / 4

Occasion-led demand with thirty-five live creatives.

OVERALL

13 / 20

5 of 5 dimensions scored

B — measurement is sound; hosting and speed are the drag

QUALIFICATION

Read this before acting on it

Tag detections here come from the site root and are reported as observed values. Google inventory is a live one-day count. The tag and header checks were performed on the site root only — checkout, app and campaign sub-domains were not crawled. Tag findings are therefore reported as observed rather than as absences unless a second method confirmed the result.

05 ORDERED BY EFFORT AGAINST IMPACT

Suggested next steps

1

LOW EFFORT · IMMEDIATE BENEFIT

Add cache-control headers and a cache layer

A hosting change, not a rebuild. It is the single cheapest speed improvement available to this site.

2

UNDER AN HOUR

Set four security headers

HSTS, frame options, content-type options and a basic CSP. One config edit.

3

HALF A DAY · BIGGEST SINGLE WIN

Build one occasion campaign structure

Birthdays, anniversaries and corporate orders have known dates and high ticket sizes. One tidy campaign with clean naming is enough creative at this spend level.

4

UNDER AN HOUR

Route celebration enquiries off the shared inbox

A separate address or form for occasion orders. Free, and it protects the best-margin path.

5

LOW EFFORT

Verify the Meta pixel fires on order completion

The pixel is present. Confirming the event it counts makes Meta reporting comparable with Google.

NEXT STEP

Happy to walk through any of this on a short call.

7095024220

Nothing here requires new tooling. The first items are configuration, not rebuilds.

ABOUT THIS REPORT

Prepared by Smart Pursuit for The Baker's Dozen. Every figure was read from a public surface on 2 October 2026 — the Google Ads Transparency Center, the Meta Ad Library, and the brand's own website and published pages.

HOW TO CHECK IT

Each finding quotes the raw measurement above it. Ad counts can be re-checked by domain in the Google Ads Transparency Center (region: India), and tag IDs by opening the site and searching the page source. Spend, ROAS and CPA are private to the advertiser, so they are marked unavailable rather than estimated.
